Subject Index of Volume 25

Aging effects
of small aluminium conductors, investigations on accelerating, 59

Battery energy storage system
harmonic and reactive current compensation using voltage source inverter in, 25

Conductors
small aluminium, investigations on accelerating aging effects of, 59
Control center
electric, operator's assistant expert system, 239

Decoupling
and stabilization of multimachine power systems, new method for, 121
Distribution system simulator
integrated, using a microcomputer, development of, 17
Dynamic and static security constraints
optimal dispatch under: toward concept of integrated security, 213
Dynamic response
of synchronous machine, preliminary results on neural net based simulation of, 159

Economic dispatch
on-line, using new loss coefficient formula, 131
Economic power dispatch method
with security, 9
Electromagnetic transients
development of program for fast calculation of: first results, 177
Expert system
electric control center operator's assistant, 239
Extended equal area criterion approach
to transient stability analysis of Taipower system, another version of, 111

Fast decoupled load flow
convergence of, for systems with heavy reactive power compensation, 91
Filter
large-scale mechanical — application of turbogenerator flywheel coupling, 35
Fuzzy logic power tracking controller
for photovoltaic energy conversion scheme, 227

Generator voltage
estimating fall in, following impact load, 73

Harmonic and reactive current compensation
using voltage source inverter in battery energy storage system, 25
HVDC link
modulated, effect of, on power system transients, 101

Impact load
estimating fall in generator voltage following, 73
Impulse voltage distribution
in windings of large power transformers, determination of, 183
Induction machines
new look at effects of unbalanced voltages upon, 199
Integrated security
toward concept of: optimal dispatch under static and dynamic security constraints, 213

Load flow model
with remote voltage control by generator, extension of, 207
Load forecasting techniques
short-term, identification of standard for comparing, 149
Loss coefficient formula
new, on-line economic dispatch using, 131

Mechanical filter
large-scale — application of turbogenerator flywheel coupling 35
Model reduction techniques
practical, for power systems, 169
Modulated HVDC link
effect of, on power system transients, 101
Multimachine power systems
new method for decoupling and stabilization of, 121

Neural net based simulation
of synchronous machine dynamic response, preliminary results on, 159
Neural nets
possible applications of, to power system operation and control, 83

Operator's assistant
expert system, of electric control center, 239
Optimal dispatch
under static and dynamic security constraints: toward concept of integrated security, 213
Overhead lines
nonuniform, zero-sequence representation of, 65

Partial-discharge measurement
advanced digital instrumentation for, 191
Photovoltaic energy conversion scheme
fuzzy logic power tracking controller for, 227
Power conditioning system
three-phase modeling, and improving its transient behavior following heavy load drop, 137
Power dispatch method
new economic, with security, 9
Power tracking controller
fuzzy logic, for photovoltaic energy conversion scheme, 227

Quantization controllers
voltage profile correction of load bus by static reactive power compensators with, 47

Reactive current and harmonic compensation
using voltage source inverter in battery energy storage system, 25

Security
new economic power dispatch method with, 9
integrated, toward concept of: optimal dispatch under static and dynamic security constraints, 213
Simulator
integrated distribution system, using microcomputer, development of, 17
Stabilization
and decoupling of multimachine power systems, new method for, 121
Static and dynamic security constraints
optimal dispatch under: toward concept of inegrated security, 213
Static reactive power compensators
with quantization controllers, voltage profile correction of load bus by, 47
Synchronous machine dynamic response
preliminary results on neural net based simulation of, 159
Synchronous machines
new look at effects of unbalanced voltages upon 199

Three-phase power conditioning system
modeling, and improving its transient behavior following heavy load drop, 137
Transformers
large power, determination of impulse voltage in windings of, 183
Transient stability analysis
of Taipower system, another version of extended equal area criterion approach to, 111
Transients
of power system, effect of modulated HVDC link on, 101
electromagnetic, development of program for fast calculation of: first results, 177
Turbogenerator flywheel coupling
application of — large-scale mechanical filter, 35

Unbalanced voltages
new look at effects of, upon synchronous and induction machines, 199

Voltage control
remote, by generator, extension of load flow model with, 207
Voltage instability problems
in two-and multiterminal HVDC systems connected to weak AC systems, analysis of, 1
Voltage profile correction
of load bus by static reactive power compensators with quantization controllers, 47
Voltage source inverter
in battery energy storage system, harmonic and reactive current compensation using, 25

Windings
of large power transformers, determination of impulse voltage distribution in, 183

Zero-sequence representation
of nonuniform overhead lines, 65
